Graphical Point of Sale

G-POS touch screen software is a versatile graphics based product compatible with most leading manufacturer's touch screen hardware. Up to 400 layers of product and pricing information can be stored on the system including graphic images as well as descriptions. This graphical system drastically reduces the training time for operators and makes it virtually language independent. The product buttons are infinitely variable in size enabling the system to be fully customised giving unlimited functionality. On screen prompts and product information allows staff to "up sell" to customers. Back office sales reports are a standard feature of G-POS's utility programming and setup module.

PERIPHERALS

Multiple Scanners

Fast Thermal Receipts

Shelf Edge & Label Printing

Fingerprint Recognition

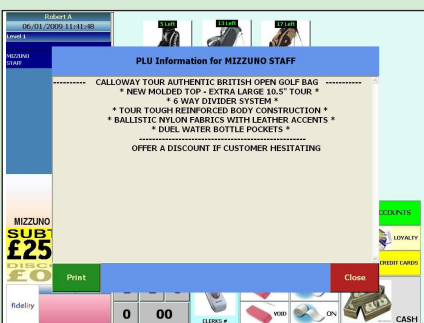

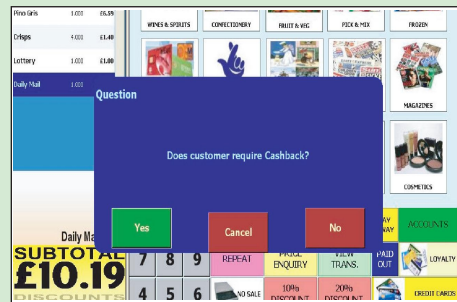

Stock count down

This feature enables staff to see at a glance how much stock is available for certain items. Typical uses are for speciality or promotional products which have their own hard PLU's on screen.

Cash Back

Usually used in conjunction with debit cards, this feature reduces the amount of cash in the drawers resulting in lower banking charges.

Prompts

Each PLU can have its own information / prompt screen. The prompts can pop up automatically against each PLU to instruct staff to inform customers of promotions etc or can simply be viewed by the use of a PLU Info button on screen for product information. The information can be printed for the customer using the receipt printer.

Loyalty cards

Loyalty can be implemented at three levels:-

- Discount cards - offer a straight discount attached to a card for privileged customers.
- Simple loyalty points - allow customers to gain points based on their spending habits. Points can be redeemed as a part payment against future sales.
- Integration with Fidelity's Instant Loyalty - obtain flexibility when it comes to discounts and points whilst populating a true CRM back office package with live spending habits.

Customer accounts

Different customer accounts systems can be interfaced directly to G-POS via Plug-in code technology. Plug-ins are available to link to Total Control and Sage, plus other third parties.

Facilities include:-

- Search Customers
- Select Customer
- View Detailed History
- Optionally prevent on hold accounts
- Part pay an invoice
- Impose the credit limit as set in Total Control
- Post a payment against an account

Reporting

Comprehensive management reports are available either from the touch screen terminals or from the back office programming utility. For a simple installation no further back office software is needed.

Reports include:-

- Financial Summary
- Hourly, PLU Sales & PLU Levels
- Top & Bottom 10 PLU sales by quantity or value
- In Sale PLU Alterations
- PLU by Modifiers
- Group & Main Group Sales
- Clerk Financial Summary
- PLU by Clerk
- Hours worked for each Clerk
